

# Recovery-Oriented Co-Occurring Services And Integrated Dual Disorder Treatment

Friday, July 26th 8:30 am—4:30 p.m. (8:00 am Registration)

## About this training

Adults with co-occurring mental illness and substance use disorder's have far worse outcomes in employment, hospitalization, housing, and criminal justice involvement than their single disordered peers. This co-prevalence has been studied since the 1980s, yet despite this substantive increased risk, until the 21st century, most services systems were organized to treat individuals with a single disorder, excluding those with co-occurring disorders, or providing se-quential or parallel treatments that were incompatible or in conflict with each other. Integrated services offer superior outcomes to parallel or sequential treatments, and call provider's to develop interventions to assist individuals in moving toward recovery for both illnesses simultaneously, Recovery-oriented care requires changes at a systems and individual practitioner level in areas including assessment, treatment planning, and delivery. Integrated co-occurring providers will learn about the research on integrated care including Evidence-Based Practices (EBP), and ways to develop stage-matched assessment, treatment planning, and treatment interventions for adults with co-occurring mental health and [substance use disorders](#).

## Speaker

Jennifer Harrison, PhD, LMSW, CAADC  
Western Michigan University and MiFAST

## After the presentation attendees will be able to:

- Participants will understand the history of public mental health and substance use disorder care in the US
- Participants will identify the methods used to develop and test evidence-based practices for co-occurring disorders
- Participants will understand staging and stages of change, as well as how to use staging tools with clients and treatment teams to decide on appropriate interventions.
- Participants will rehearse completion of a contextual and longitudinal assessment for individuals with more than one chronic illness.
- Participants will develop 2 examples of goals, objectives, interventions, and discharge criteria for common co-occurring needs.
- Participants will understand the process for finding the best interventions for a particular clinical situation.
